

The Human Reliability Company

Project Integrity

Project Database Reconciliation

SPI to Control System Databases

Houston SPI LTUF Meeting

May 13, 2014

About PAS

Founded in 1993

- Provider of *Human Reliability Software™* for *safe production*
 - *Human reliability is* a metric that relates to human factors that help minimize human error and lead to optimum human performance.
- Serving Power, Oil & Gas, and Processing industries globally
- Sustainable and profitable growth

Business Strategy

- Innovative technologies inspired by domain expertise
- Strategic customer relationships
- Mission critical software solutions
- 20% annual R&D Reinvestment

Thought Leadership & Strategic Partnerships

- Alarm Management and HP HMI Handbooks
- AICHE, NPRA, EPRI, ISA, EMMUA 191, OSHA
- Honeywell, Invensys, Intergraph, NovaTech and regional partners

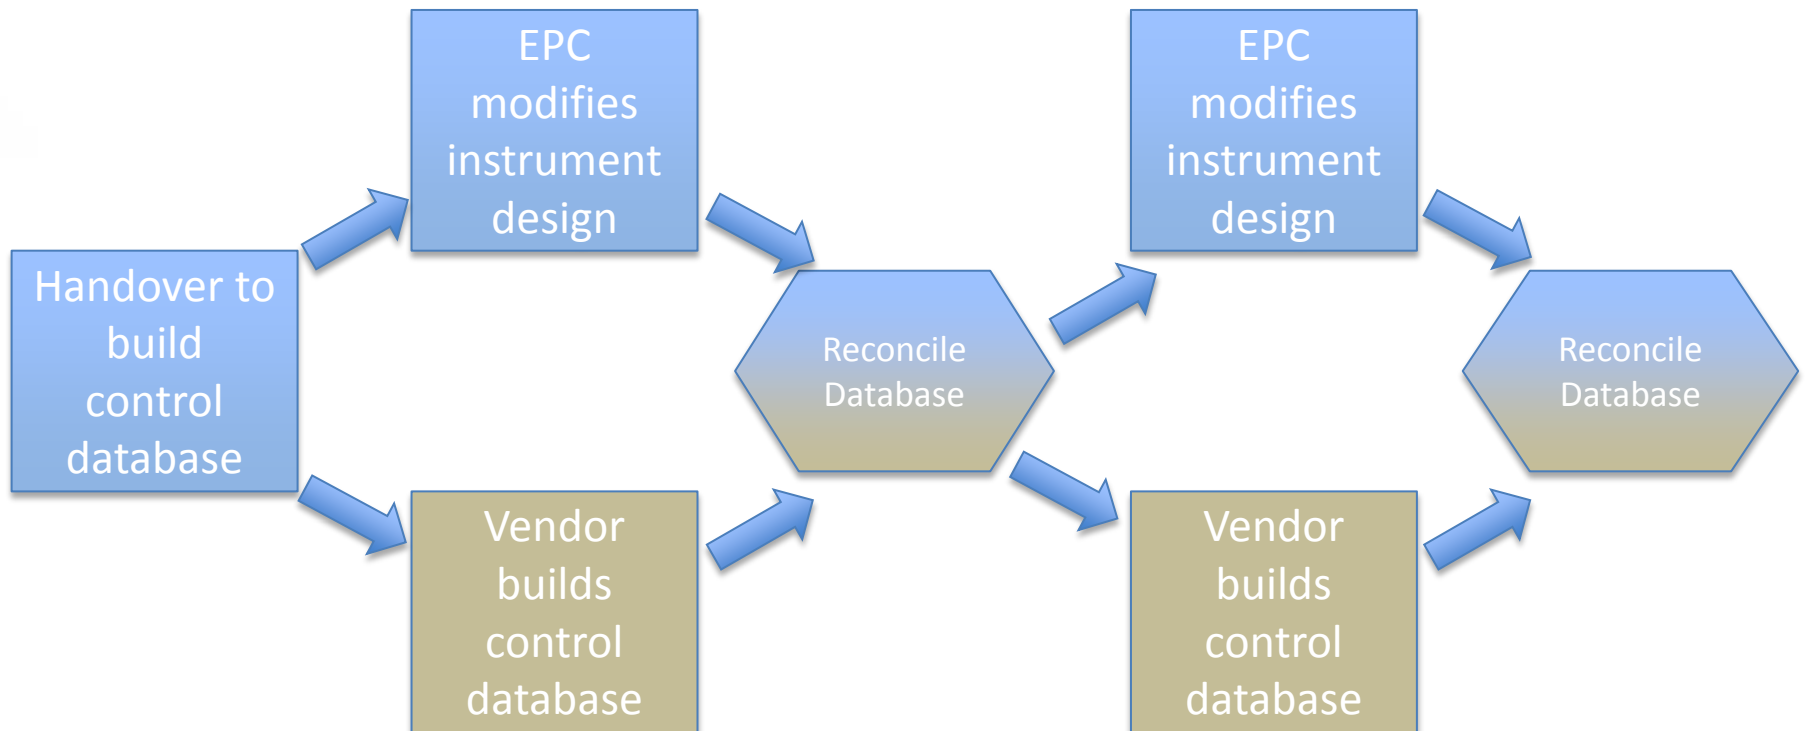

SPI-DCS/SIS Database Reconciliation

- Intergraph Smart Plant Instrumentation (SPI) Used by EPC for designing Instrumentation
- DCS/SIS Vendors use SPI database to build control database
 - SPI and DCS database begin to diverge
 - Revisions continue in SPI-DCS/SIS databases, creating discrepancies
- During several stages in the project, manual work process used to reconcile divergent databases
 - I/O Slot locations
 - Tag names
 - Engineering units
 - Descriptions
 - Device manufacturer for smart devices
 - Ranges
 - Etc.

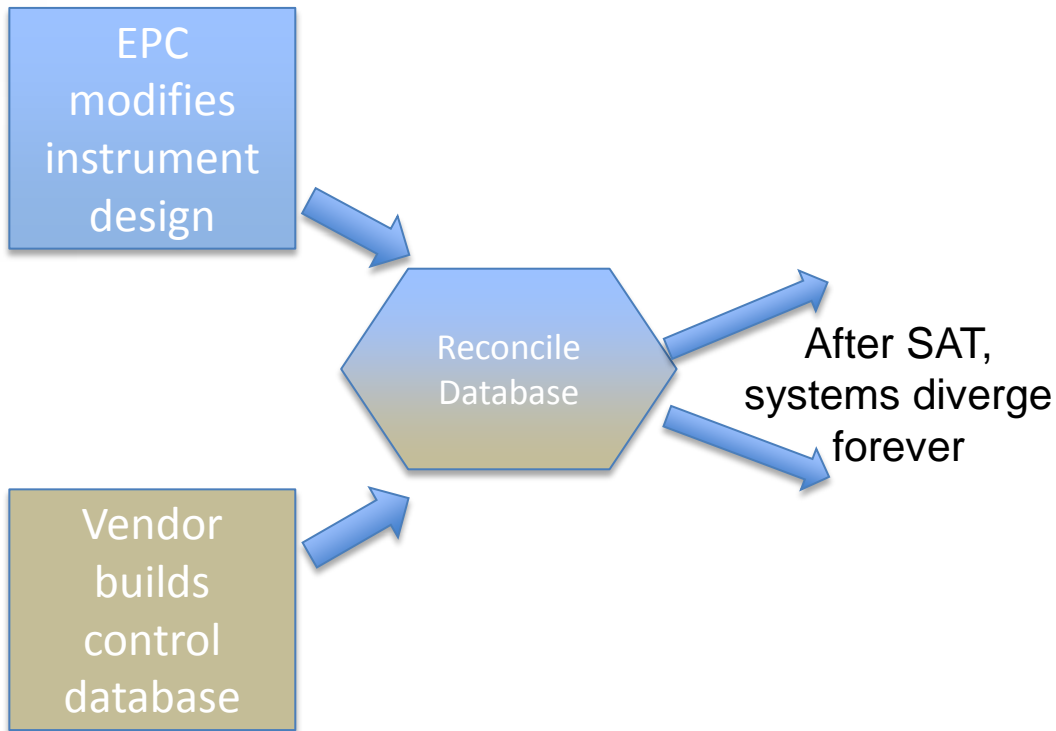

Typical Project Process

During Project Execution, SPI is the “master” database – control databases are designed from the master

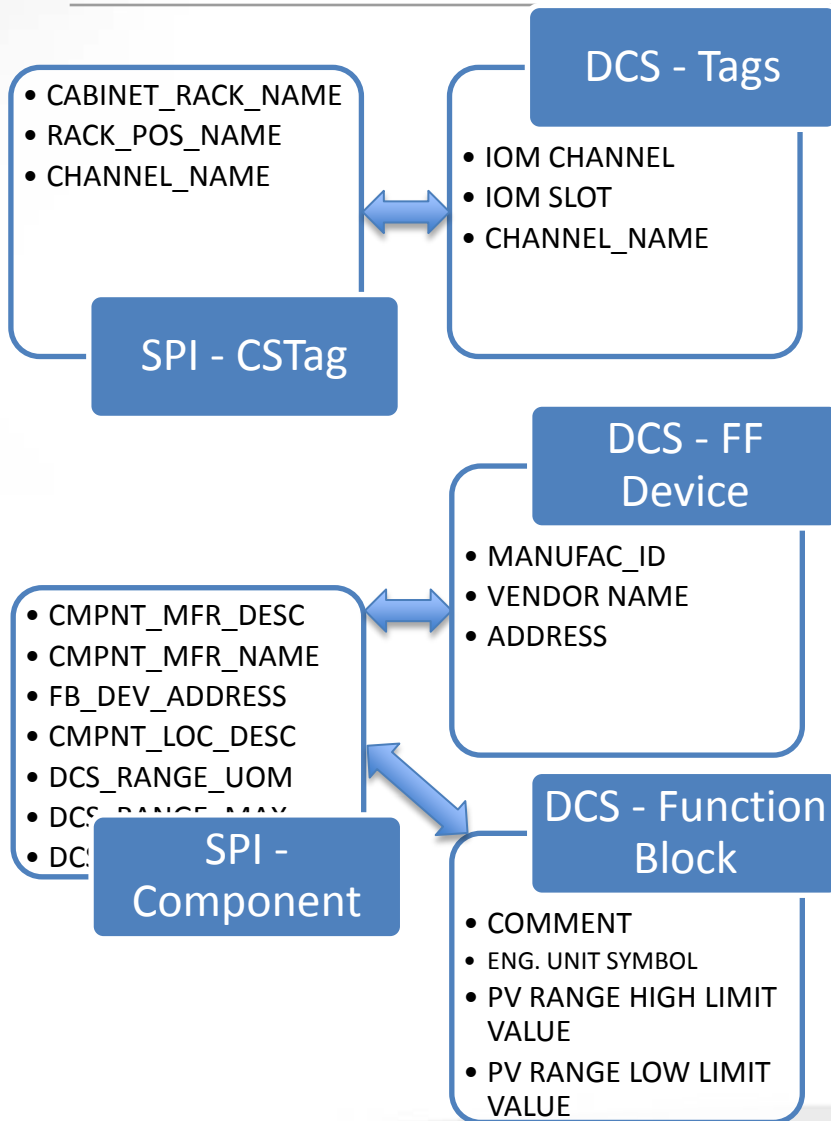

Typical Project Process

Typical Effort for Reconciliation

- 1 DCS with 10,000 I/O, 4 SIS with 1000 I/O each
 - 7 man weeks
 - 3 weeks calendar time
- Reconciliation typically done 3 to 4 times during the project
 - Detailed Design
 - Pre FAT
 - Post FAT
 - Post SAT
- Total Effort
 - 28 Man Weeks
 - 12 weeks calendar time

Typical Project Reconciliation Process today

At each phase of the project this task is executed 7,765

Object Name	CABINET_RACK_NAME	RACK_POS_NAME	CHANNEL_NAME
XI -6001	NODE-1	SLOT-1	10
↕	↕	↕	↕
Object Name	IOM CHANNEL	IOM SLOT	IOM NODE
XI_6001	10	1	1

At each phase of the project this task is executed 566

Object Name	CMPNT_MFR_DESC	CMPNT_MFR_NAME	FB_DEV_ADDRESS
LY -120B1	0x01151	Emerson	0xF2
↕	↕	↕	↕
Object Name	MANUFAC_ID	VENDOR NAME	ADDRESS
LY-120B1	0x00005100	Fisher Controls	0xF2

At each phase of the project this task is executed 9,951

Object Name	CMPNT_LOC_DESC	DCS_RANGE_UOM	DCS_RANGE_MAX	DCS_RANGE_MIN
LY -120B1	PROCESS MODULE	%	100	0
↕	↕	↕	↕	↕
Object Name	COMMENT	ENG. UNIT SYMBOL	PV RANGE HIGH LIMIT VALUE	PV RANGE LOW LIMIT VALUE
LY_120B1	TEST SEP WTROUT	%	100	0

28 Man Weeks of Effort for Reconciliation

Integrity System Validation

- Integrity Automatically identifies mismatches between the databases
 - I/O Slot locations
 - Tag names
 - Engineering units
 - Descriptions
 - Device manufacturer for smart devices
 - Ranges
 - Etc.
- Saves engineering effort, improves quality
- Can be extended to validate other connected systems
 - DCS to SIS, APC, Historian, PLC's etc
 - SPI upgrades, SPI to SPI database versions
- Ensures accurate interfaces between disparate control systems throughout the life cycle of plant from design through operations

Example Discrepancies

4 Man Weeks of Effort for Reconciliation

Higher Quality, Less Cost

One System to Ensure all databases are synched

Benefits & Savings – 14,000 I/O Project

- Shorten FAT and SAT
 - Less time spent identifying discrepancies, determining “who is right”
 - Faster startup (less time tracking down errors)
 - Errors found and remediated in the engineering offices, not at FAT or onsite
 - ***Savings in the millions of dollars*** by shortening FAT and SAT by several weeks
- Reduction in costs - Manpower
 - 28 Weeks Without Integrity, 4 Weeks With Integrity
 - ***24 Weeks (86% Savings) Reduction in I&E engineering effort (\$170,000)***
- Database validation continually occurs, finding errors quickly and improving project quality
- Automatic validation of SPI database post startup
 - I&E techs use SPI database to drive instrument reliability program
- Validation can be extended to other integrated databases
 - DCS to SIS, PLC's, APC, Historian, etc.
 - Similar savings as documented with SPI

Integrity saves millions of dollars by decreasing cost and risk associated with systems integration
