

Smart Instrumentation 2018 / 2019 Upgrades

Apparent issues in porting Smart Instrumentation to .NET :

- SI 2018 has not been validated for use on Fluor projects as it failed Fluor certification testing and will not be deployed on projects
- In the 2018 INS_Readme.pdf file there are 1165 known Open Problems that have not been resolved (90 Pages)
- The release of SI 2019 only corrected about 200 of the Open Problems in SI 2018
- Fluor has not purchased a license for SI 2019 as yet pending a more stable version or update.
- Two Presentation at HxGN indicated several issues when upgrading from previous versions and both recommended using outside resources to upgrade
